

Want to keep your organization safe from cyber threats?

Go beyond inflexible, antiquated policy management.

With **X-Ploit Resilience**, you can see and manage your software inventory and, at the same time, achieve preemptive vulnerability management. This scalable, flexible and intuitive tool can handle both Microsoft and 3rd party software on-the-fly, from anywhere in the world and according to any schedule.

With an intuitive, clean interface and comprehensive reports, you continuously have an overview of essential software, its security status and all the tools necessary to prove compliance.

Everything in one place, with granular controls so you can act precisely.

This way, you ensure that:

The software critical to your organization's smooth running (internal, 3rd party or Windows related) is managed from a unified, secure interface.

Your organization has a rapid deployment of security-critical patches and updates, for essential resilience against cyber threats.

By automating this process and allowing a granular control over your software environment, your internal resources are free to focus on other, more pressing matters.

Administrators can install and update automatically or grant privileges to users to manage their own software securely, according to custom-built, flexible policies.

Vulnerability management is automated, providing actionable reports for risk management.

With the **Infinity Management** module, Administrators within any organization also gain the unique ability to deploy custom, in-house software and patches that are not available in the **X-Ploit Resilience** catalogue.

How do you mitigate vulnerabilities efficiently, without putting undue strain on your resources and employees?

X-ploit Resilience and Infinity Management will help.

Multiple deployment tools create confusion, slow down your reaction time and open your Enterprise to devastating malware and ransomware attacks.

99% OF EXPLOITED VULNERABILITIES

99% of the vulnerabilities exploited will be the ones known to security and IT professionals for at least a year.

- Gartner

Outdated software is the most common attack vector. It leaves your organization exposed and can result in ransomware infections or critical data leaks.

\$5 MILLION IN DAMAGE COSTS

\$5 million – the average cost of a single ransomware attack.

- Ponemon Institute

3,785 CORPORATE DATA BREACHES

In 2017, as recorded in The Internet Crime Complaint Center (IC3). On average, 10 data breaches happen daily.

- FBI

Vulnerability management should not be a game of whack-a-mole, nor the biggest time-sink in your workflows because of antiquated, opaque solutions.

Move beyond SCCM / WSUS and discover this unique threat prevention and policy deployment tool for an unrivaled control over your entire infrastructure.

X-Ploit Resilience: the next-gen, fully automated patching and software management solution.

Exercise true control over your environment and build true resilience in front of critical cyber threats like ransomware.

Leading product and intelligence

Appraised by the FBI, working with EUROPOL and USDOJ and endorsed by NC3

"Enable the automatic software updates whenever possible."

- extract of Official US-Cert Guidelines

Time and time again, authorities and independent parties have stressed the importance of **automated vulnerability management**.

Time and time again, organizations have struggled to follow these guidelines because of time, **budget or platform constraints**.

But that was the past.

X-ploit Resilience and its optional Infinity Management module provide not only automated vulnerability management but also a full Software Asset Management.

Your organization can now:

- See ANY software assets in inventory and their version and installed volume
- Create inventory reports for reporting or compliance purposes

Features	 PLOIT RESILIENCE	 STANDARD SOLUTIONS

True cyber resilience and security starts with efficient vulnerability management. It's also critical to demonstrate compliance with GDPR and UK PSN software patching regulation.

This next-gen approach to vulnerability management leverages Heimdal's fully secure Global CDN infrastructure to ensure that deployment fits the local endpoint needs.

Manage assets and mitigate vulnerabilities, by the click of a button.

X-Ploit Resilience provides not only automated vulnerability management but also Full Software Asset Management for your organization to:

- ✓ See any software assets in inventory, alongside their version and installed volume
- ✓ Create inventory reports for accurate assessments and compliance demonstrations
- ✓ Update or downgrade the software or operating system you want
- ✓ Un-install a supported software you want to target
- ✓ Install the selected software to more or all your systems
- ✓ Allow users to install given software themselves
- ✓ Deploy custom software to the endpoints, anywhere in the world*
- ✓ Set the time you want to do updates

The Infinity Management add-on module will allow you to deploy any software, at any location, at any time. Whether remotely installing Microsoft Office 2016 with a license key, deploying Printer drivers and software or any other licensed software, the sky is the limit:

- ✓ Encrypted packages stored on our servers
- ✓ HTTPS transfers from Heimdal Security servers
- ✓ Usable anywhere in the world with no extra infrastructure
- ✓ Offers installation catalogue, managed by the admin
- ✓ Accepts any MSI / EXE installer and offers command lines for scripting

Get in touch today to experience the fullX-Ploit Resilience and Infinity Management capabilities.
