HEIMDAL™ SECURITY

Thor AdminPrivilege™

Experience the time-saving revolution of managing admin rights for your organization securely from one hub.

Our centralized admin rights management solution will make sure system admins can safely grant privileges to network users with more control and ease.

Insider threat is the biggest liability of medium and large companies, so removing admin rights from regular users is essential.

Admin rights tend to be hard to remove in case of a security incident.
Until system administrators access the device, directly or indirectly, the harm can already be done, especially if the machine is taken over by malware.

Security breaches caused by insiders are hard to detect by system admins who lack a centralized view of each endpoint's activity and permissions use.

Cybersecurity breaches most often than not are caused by people, intentionally or unintentionally

Take care of your employees and network admins' time:

- ✔ Fast-track all admin rights grant and removal processes
- ✔ Keep a full audit trail of escalated admin rights and files executed
- ✔ Maintain a centralized control and overview over endpoints' admin privileges
- ✔ Escalate or deny admin rights on the go, from mobile

Heimdal AdminPrivilege™:

Main Features and Specs

A secure solution for managing user rights safely and easily

From the **AdminPrivilege™** dashboard tab or on mobile, system administrators will be able to view what permissions the users in their organization are asking for and grant (or deny) their requests for a set time window.

The perfect complement to your other cybersecurity protective measures

Even though **Heimdal AdminPrivilege™** is available as a stand-alone product, it works perfectly alongside our cybersecurity suite in order to boost your EDR security to new heights. For instance, if you run **Thor Foresight Enterprise** (or Thor Premium Enterprise), then admins can choose to block elevation of rights for the endpoint if it has suspicious behavior – this is a unique item that only **AdminPrivilege™** can do.

Modular, scalable, and centralized

Heimdal AdminPrivilege™ benefits from the latest trends in cutting-edge technologies for companies and organizations.

More time saved for sys admins, central overview, granular control, and an advanced security for your entire IT network.

All in a lightweight and easy to use network permissions management system which both admins and regular users will love.

Cybersecurity breaches caused by insider threats amount to
$8.76 MILLION PER YEAR
- Ponemon Institute

The average cost of a data breach for an impacted company is
$3.86 MILLION WORLDWIDE

$7.91 MILLION IN THE U.S.
- DigitalCommerce360

Time it takes organisations to detect a data breach is
196 DAYS ON AVERAGE
- Ponemon Institute

The misuse of privileged credentials is involved in over
80% OF DATA BREACHES
- Forrester

51% OF COMPANIES WORLDWIDE
are concerned about unintentional insider cyberattacks.
- CyberSecurity Insiders Report

Therefore, tracking the escalation and de-escalation of admin rights as well as the files executed over the escalation window are essential necessities for a fully secured network.

This will help discover potential data breaches faster and ensure better compliance to data protection legislation.

Partner:

Microsoft

Thus, it is both modular (works together with our cybersecurity suite or as a stand-alone), scalable (add more endpoints to the system as you need them) and centralized (easy to keep track of each endpoint's history of access level requests).

Easy to use by both users and system administrators

With **Heimdal AdminPrivilege™**, it's much easier for you and your users to handle software installations, without compromising security by granting everyone full rights. Users will get their rights & installs much faster, and admins will be able to approve or disprove requests even on mobile if they're on the go.

Full audit trail and faster detection of potential data breach:

The **Admin Privilege™** dashboard allows you to easily check the log of escalation rights for each endpoint, as well as a log of files executed by the user while rights were escalated. Thus, you will have better incident prevention, detection and reporting.

Features	Thor AdminPrivilege	Manually escalating rights	Granting default admin rights
Centralized admin rights escalation/de-escalation	✓	✗	✗
Protection against insider threat	✓	✓	✗
Faster detection of data breaches	✓	✗	✗
Ability to cancel granted privileges at any time	✓	✗	✗
Approve/Deny escalation via the Heimdal Dashboard	✓	✗	✗
Approve/Deny via mobile app, from any remote location	✓	✗	✗

THOR ADMINPRIVILEGE

By using AdminPrivilege™, you:

- ✓ Can remove administrative rights and manage them case by case
- ✓ Prevent privilege abuse and data breaches due to human error
- ✓ Allow admins to discover breaches faster
- ✓ Eliminate the time waste of manual enabling and disabling of rights
- ✓ Document the history of each endpoint much better, securing it against exploits

Offer your system administrators the gift of more time and a more secure control, with a granular overview and easy to manage permissions for all endpoints across the organizations.

Offer yourself a better protection against all insider threat, social engineering and data breach risks.

Why choose Heimdal AdminPrivilege™?

Empower your system admins and liberate

No more time wasted on manual enabling and disabling of rights, or on having to go to each user endpoint for installing software or updating it manually.

Use the power of cutting-edge technology.

The software allows the valuable intelligence gathered by the code-autonomous protection modules to be fed back into the included next-gen Antivirus.

Get in touch today to get your next-level permissions management system, AdminPrivilege™, and secure your endpoints while making life easier for your admins.
